Agent Reasoning

HUMAN: What are the Top 10 most sold comics?

AI:

Step 1: List all tables in the database

To start solving this problem, I need to first identify the relevant table(s) in the database that contain information about comic sales. I will use the `sql_db_list_tables` tool to get a list of all tables in the database.

Step 2: Get the schema of relevant tables

Once I have identified the relevant table(s), I will use the `sql_db_schema` tool to get the schema of those tables. This will help me understand the structure of the data and which columns I need to query.

Step 3: Construct a query to get the Top 10 most sold comics

After understanding the schema of the relevant table(s), I will construct a SQL query to get the Top 10 most sold comics. I will use the `sql_db_query` tool to execute this query.

Step 4: Execute the query and get the results

I will execute the query and get the results.

5: Return the results in markdown format

Finally, I will return the results in markdown format.

Let's start with Step 1.

Step 6: List all tables in the database

TOOL: Branch, Comic, Customer, Employee, Inventory, Publisher, Sale, SaleTransactions

AI:

TOOL:

```
SELECT Comic.Title, SUM(SaleTransactions.Quantity) AS TotalSales
FROM SaleTransactions
INNER JOIN Comic ON SaleTransactions.ComicID = Comic.ComicID
GROUP BY Comic.Title
ORDER BY TotalSales DESC
LIMIT 10;
```

AI:
